

# How To Find \$500K NNACV In 30 Days

## HOW TO FIND NET NEW ACV IN OPERATIONS

*This is not a new product pitch.*

This is a way to activate operational use cases inside accounts that already run ServiceNow by bringing OT data into the workflows they already own.

When OT data shows up inside the platform:

- Incidents become operational
- Assets reflect real-world behavior
- Work orders become predictive
- Automation applies to revenue-generating operations

**Same platform. Same workflows. New data source.**

## WHY THIS MATTERS TO YOU

*If you only sell IT use cases, you're capped!*

Business operations budgets are larger and more urgent, tied to:

- Uptime
- Production
- Compliance
- Safety
- Revenue

When OT data activates the platform:

- Dormant modules light up
- Expansion becomes obvious
- Deals come from the business, not just IT

***This creates NNACV!!***

## HOW : 5 QUESTIONS THAT FIND REAL OPPORTUNITY

***Don't Pitch...Diagnose.***

Ask These:

- Where does operational (OT) data live today?
- Does any of that data reach ServiceNow?
- How manual or fragile is that process?
- What breaks when data is late or missing?
- If that data showed up natively in ServiceNow for one critical use case, what would change?

Listen For:

- Manual spreadsheet work
- Email chains
- Delayed work orders
- Downtime escalation
- Compliance risk
- "We know it after the fact"

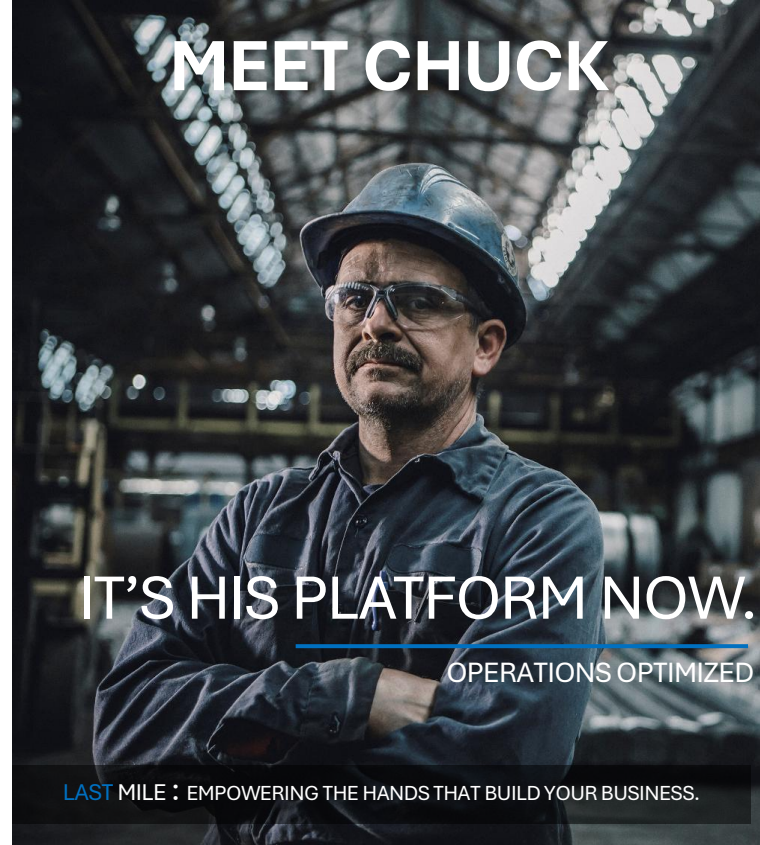

***This Is Where Pilots Come From.***

## THE QUALIFIER

***Separates Curiosity from Budget***

*"If we solved that one use case in 60-90 days using the platform you already run, would you fund it as a paid pilot?"*

***If they hesitate, there's no urgency. Move on.***

## WHERE TO LOOK BY INDUSTRY

### Manufacturing

Downtime alerts → Incident + RCA workflow

**Outcome:** Reduced MTTR, higher uptime

### Energy & Utilities

Asset health telemetry → Automated work orders

**Outcome:** Reliability + compliance confidence

### Transportation

Asset alerts → Dispatch workflows

**Outcome:** Fewer disruptions, better utilization

### Healthcare Facilities

Equipment alerts → Regulated response workflows

**Outcome:** Risk reduction, uptime

### Retail

Refrigeration/IoT alerts → Vendor dispatch

**Outcome:** Fewer outages, reduced spoilage
